EFFORTS TO IMPROVE THE KNOWLEDGE OF FERTILIZED COUPLE ON THE USE OF THE IMPLANT CONTRACEPTION

Essence

Background: The use of implants in Indonesia is still inferior to other types of contraception, such as injections and birth control pills. Implants are less popular for one reason, they are expensive. In fact, the success rate of implant contraception in preventing pregnancy is higher than the birth control pill or injection. The use of implant contraceptives is also of little interest, although there are many advantages that can be obtained by using implant contraceptives.

Purpose: to broaden the readers' knowledge regarding implant contraceptives.

Method: using an output pocket book entitled "KOMPLANT (Use of Implant Contraceptives)".

Conclusion: The KOMPLANT pocket book (Use of Implant Contraceptives) is a pocket book which contains the meaning of implants, types of implants, how implants work, implant effectiveness, advantages of implants, lack of implants, implant indications, implant contraindications, side effects of implants, timing Installation, and how to insert and remove implants, with this pocket book it is also hoped that the use of implant contraceptives will be of great interest to couples of reproductive age who wish to install contraceptives.

Key words: Family Planning (KB), implant contraceptives
