**SUMMARY**

**Background;** *The world is currently experiencing a global pandemic, Corona Virus Disease 2019 (COVID-19), which has a very massive transmission rate. As of April 24, 2020, this pandemic has spread to 210 countries with a distribution of 2,725,487 cases worldwide, 7,775 of which were found in Indonesia, with a death rate of 8.32% (Worldometer, 2020). COVID-19 had an impact in various sectors, from the readiness of health infrastructure, social, economic and mental health impacts.*

**Solutions offered;** *Some problems above prompted the authors to do a literature study on the medical review of COVID-19, the impact and emergency response strategies for COVID-19 in Indonesia. Total literature sources that become the author's references consist of 57 literatures, with details of 20 national and international scientific journals, 15 national and international books, and 22 other literature sources from articles in mass media, statistical data and examples of comparisons from other countries that have proven on existing evidence based.*

**Media output;** *The author will summarize a collection of literature studies in a handbook entitled "Serba-Serbi COVID-19: Tinjauan Medis, Dampak, hingga Strategi Tanggap Daruratnya di Indonesia".*

**Benefits;** *First, the public is expected to be able to get education related to the COVID-19 pandemic and its serious impacts. Second, nursing students hope that they can add insight into the COVID-19 emergency response strategy in Indonesia. Finally, for institutions, this handbook is expected to add to the scientific repertoire of disaster management and health science in general. So that they can prepare students who are competitive, competent, professional and can spread the widest possible benefits for the nation and state of Indonesia.*

**Keywords:** *COVID-19, medical reviews, impacts, emergency response strategies*
