***IMPROVEMENT OF KNOWLEDGE ABOUT BABY MASSAGE AGAINST
INFANITY WEIGHT INCREASE AGES 1-6 MONTHS THROUGH VIDEO***

SUMMARY

Increasing Knowledge About Infant Massage Against Weight Gain for Infants Aged 1-6 Months Through Video. The World Health Organization estimates that 54% of infant and child deaths. Malnutrition status in toddlers can have an effect on physical growth, mental and thinking skills which in turn will reduce work productivity.

Infant massage is a form of stimulation therapy provided by parents to develop its potential to its full potential.

Efforts made by using video media, parents can understand properly and correctly how to massage a baby properly, besides that they can also imitate it while watching the video.

Video is more effective, because with video, respondents can imitate baby massage movements directly and understand the touching baby massage.
