**PENINGKATAN KEPATUHAN MINUM OBAT PADA PASIEN
TUBERKULOSIS DENGAN MEDIA VIDEO**

INTISARI

Background: Tuberculosis is a chronic disease that has a long treatment period. This can result in sufferers feeling bored so that treatment becomes failed or incomplete. Various ways can be used to convey information about the increased compliance of taking tuberculosis drugs one of them with video media. Video is a medium to convey health messages in the form of audio visuals, both writing and images. **Purpose:** Provide clear knowledge information accompanied by interesting audio and images to facilitate in understanding the content of the material delivered in hopes of adding understanding and knowledge about improving drug adherence in tuberculosis patients. **Conclusion:** This video was made to improve the adherence of taking the drug in tuberculosis patients so that the adherence to taking the drug in tuberculosis sufferers is better through this video.
