SUMMARY

Stroke became the number two disease which caused death most around the world. A stroke is an illness or functional disorder of the brain deficit neurologic because of obstructive blood flow to the brain. To address problems faced by providing guidance and explanations of knowledge especially for stroke patients both at home and in the hospital for rehabilitation and participation in the patient's family. Thus, the writer has an idea or idea by making a poster with the title, "stroke steps."

The poster for stroke prevention is the one inside with an indication of stroke prevention. The purpose of this poster was to provide information, as using this medium it would enable respondents to understand how to prevent the disease.
