INCREASED PUBLIC KNOWLEDGE IS AFFECTED FLOODING USING METHODS OF DISASTER MITIGATION	
SUMMARY	
<p>Indonesia is an island nation with varying geographical characteristics both in a tectonic order, meteorological dynamics, and climatological prone to natural disasters. One common disaster is flooding. BNPB (National Disaster Relief Agency) recorded flood events in the Indonesians in 2010 – 2019 at a time such as 343. The events of the flood could lead to building damage and lead iwa victims to mitigate impact BNPB has a way called mitigating the disaster. Mitigation the disaster will be delivered to society because they are the first to deal with the flood disaster. For increasing public knowledge of disaster mitigation can be done with KIE (Information Communication and Education) in the form of poster. This poster runs on safe mitgation tips. This poster contained briefly flood mitigation materials, its own target for flood prone residents deficient in their knowledge.</p>
