SUMMARY

Background: Landslides are the sudden or gradual collapse of soil or rocks, generally occurring in steep and unstable areas. In 2019 to early 2020 there were 2,229 incidents. During 2019 alone, there were 1,549 landslide disasters. Of the total disaster incidents in Indonesia, the number the death toll reached 198 people, lost 8 people, injured 273 people and residents 2.3 million people who suffer or are displaced. Therefore, it requires preparedness efforts in mitigating landslides. So the authors made an output in the form of a pocket book as an effort to improve landslide preparedness. **Methods:** With the media in the form of a pocket book entitled "Responding and Resilience to Landslide Disasters with Mitigation", it was created as a medium of communication and education to provide information and increase public knowledge about landslide mitigation. **Result:** The output is in the form of a pocket book of Landslide Disaster Response and Agility with Mitigation, it is hoped that it can be used as a community guide and can be applied by the community before facing a landslide disaster. **Conclusion:** The pocket book media of Landslide Disaster Response and Agility with Mitigation is made attractive and easily understood by the community in order to increase knowledge in landslide mitigation.
