***SUMMARY***

***Background:*** Stroke is a brain function disorder that occurs suddenly due to disruption of blood supply to the brain which causes reduced oxygen supply to the brain, this causes disability in the form of paralysis of the limbs and speech disorders. The prevalence of stroke in Indonesia at age  $\geq 15$  years is around 10.9%. One of the effects of stroke is motor afasia, which causes symptoms in the form of speech that is not fluent and the words are difficult to understand. AIUEO therapy is a therapy to help stroke sufferers master speech communication better, this therapy focuses on improving speech for stroke sufferers who generally experience communication problems. ***Purpose:*** to provide clear information to the public regarding the application of AIUEO therapy in stroke patients with motor afasia. ***Method:*** the media used to add information and knowledge in the form of booklets. ***Result:*** booklets can be a medium for independent learning, can increase knowledge of families and stroke patients in administering AIUEO therapy. ***Conclusion:*** The booklet on the application of AIUEO therapy can be used by the community, especially family members who have suffered a stroke with motor afasia. Booklets can be used by health professionals in assisting the recovery process of stroke patients with motor afasia.
