ABSTRACT

Background: Fever is an increase in body temperature above normal. The number of fever cases worldwide reached 18-34 million in 2019, Indonesia has a fever incidence rate of 0.72% in 2017, to 0.71% in 2018. The incidence of fever in Jawa Tengah in 2019 is around 2-5% in children aged 6 months to 5 years each year. Compresses onion can be applied to low fever $37.2-38.3^{\circ}\text{C}$, before being given treatment at 37.97°C , after being given red bawang's compresses need to decrease to 37.57°C , with a standard deviation of 0.46. **Content:** it is the goal and education of people to have a garganoise box against a child's lower body temperature and prevent a higher fetal fever. **Methods:** methods used by media outlets with posters are expected to be able to be used to ensure communities with Onions on. **Result:** The final project produced is the result of the KIE project in the form of a posters. **Conclusion:** posters can be used as sources of information against people in delivering edukass on the benefit of onion comers to reduce children's body temperature.

Keywords: fever, Onions, child
