SUMMARY

Background: *The occurrence of covid-19 not only has an impact on the sufferer but also affects lives throughout the world, Covid-19 sufferers experience shortness of breath so that to carry out their activities they must be assisted by other people. Elementary school children have activities that are quite risky because they are vulnerable to viruses and diseases so they need communication, information and education. Communication, information and education about Covid-19 prevention measures in schools is important to reduce the number of Covid-19 transmission in the school environment.* **Method:** *The KIE output method is in the form of an educational video about the steps to prevent covid-19 in schools.* **Results:** *The KIE media is in the form of video media, video media is more effective, more interesting to watch so that it can be easily understood and can be watched anytime anywhere.* **Conclusion:** *Educational videos about covid-19 prevention measures can add information and knowledge for elementary school children and the wider community about effective Covid-19 prevention measures in schools to reduce the spread of virus transmission.*

Keywords: *Prevention of covid-19, Elementary School, Covid-19, Video*
