ABSTRACT

Background: *According to BPBD Surakarta in 2022, the city of Surakarta is in third place for flood disasters, after the earthquake disaster at number one and the volcanic eruption disaster at number two. Several villages in Surakarta were affected by flooding, namely Pasar Kliwon, Laweyan, Serengan, Pucang Sawit, Gandekan, Sangkrah and Jebres subdistricts. Floods can threaten and disrupt people's lives by causing loss of life, environmental damage, property loss, and psychological effects. The level of anxiety in flood-prone areas in Surakarta, especially in Nusupan Hamlet, Kadokan Village, most respondents experienced moderate anxiety (55.7%). Anxiety is caused by unforeseen disasters.* ***Objective:*** *To describe the characteristics of the community and the level of anxiety among residents in flood-prone areas in Pucang Sawit, Surakarta.* ***Method:*** *This research method is descriptive with a population of 387, a sample size of 88 respondents.* ***Results:*** *There was no anxiety for 49 respondents (55.7%), mild anxiety for 25 respondents (28.4%), anxiety for 8 respondents (9.1%), severe anxiety for 5 respondents (5.7%), very severe anxiety 1 respondent (1.1%).* ***Conclusion:*** *residents who live in flood-prone areas experience mild-moderate anxiety and most experience no anxiety*

Keywords: *Flood, Anxiety, Community*
