### **SUMMARY**

**Background** ; Disaster is a natural process that causes loss of life, property and damage to the environment and life. The death toll reached 665 people as a result of the disaster. Landslides are geological natural disasters caused by natural phenomena and human actions in managing land. Disaster management consists of Pre-disaster, During Disaster and Post-Disaster. Mitigation is part of pre-disaster which has a role in reducing disaster risk, preventing and reducing the number of casualties when a disaster occurs. The impact of risk can be minimized by preparedness, which is assessed based on indicators of the level of knowledge, attitudes, and actions. **Method** ; Utilizing Microsoft Word and Corel Draw applications to modify the layout of the background design and the output image in the form of a landslide disaster preparedness pocket book to provide education on preventing landslides. **Results** ; IEC media is in the form of a pocket book containing information on landslide disaster preparedness accompanied by supporting images so that it is easy to understand. **Conclusion** ; The pocket book media is expected to provide benefits and information to the public to take action and prevention when a disaster occurs.

**Keywords** ; Education, Preparedness, Landslide, Pocket Book.
