

INTISARI DARI PENELITIAN PENERAPAN TERAPI GENGGAM BOLA
KARET DIBANGSAL ANYELIR RSUD dr.SOEDIRAN MANGUN SUMARSO

Based on the case study of muscle strength in Mr. Su and Mr. Based on the Stroke problem that the author has done, the following conclusions can be drawn:

1. Measurement of muscle strength before being given hand-held rubber ball therapy showed that on day 1 the muscle strength of the two patients was 3
2. After holding the rubber ball therapy on day 4, the muscle strength of the two patients was 5.
3. There was a development in the therapy of holding a rubber ball before and after it was carried out for 4 consecutive days, there was an increase in both patients.
4. There is a difference in the increase in muscle strength before and after the rubber ball handheld therapy.
