**ABSTRAC**

**Background:** The prevalence of schizophrenia mental disorder reaches 1.7% of a thousand Indonesian population with a total of 400,000 sufferers. Schizophrenia has an impact on sufferers, one of which is hallucinations. Sufferers listen to murattal Al-Qur'an as a way to reduce hallucinations. **Objective:** To find out the results of applying Al-Qur'an murattal therapy to the level of auditory hallucination scale in schizophrenic patients at RSJD Dr. RM. Soedjarwadi Central Java Province. **Method:** This research includes descriptive research with case studies. **Results:** The results before implementing the murattal Al-Qur'an level of the auditory hallucination scale on Mr. M is moderate with an AHRS score of 16 and Mr. R is heavy with an AHRS score of 23. After implementing the murattal Al-Qur'an the level of the auditory hallucination scale on Mr. M is mild with an AHRS score of 9 and Mr. R is moderate with an AHRS score of 15. In the application that has been carried out, there are developments in 2 respondents, namely experiencing a decrease in the level of hallucinations of sufferers after listening to murattal Al-Qur'an. **Conclusion:** There is a comparison of development between the levels of the hallucination scale after and before listening to the murattal Al-Qur'an.

**Keywords:** Hallucinations, Hallucination Scale Level, Murattal Al-Qur'an.
