SUMMARY

Background : Strong winds are strong winds that can make objects fly and cause damage. Preparedness is part of disaster management and is an effort to reduce the negative impact caused by disasters. According to the BNPB, there were 441 incidents of strong winds in Indonesia in 2011. A year later, the number increased to 543 times, and in 2016 it became 663 times. In 2021, there were 1,577 incidents of strong winds in Indonesia, or an increase of 3.5 times compared to 10 years before. **The objective of research :** As an information medium for the public to understand preparedness in facing hurricane disasters. **Methods :** Using the media booklet entitled "Education on Community Preparedness in Facing Ngin Noisy Disasters" **Results :** The output of this final project is in the form of a booklet entitled "Education on Community Preparedness in Facing Hurricane Disasters" which is expected to provide benefits to the community regarding preparedness for facing hurricane disasters. **Summary :** It is hoped that this booklet will be useful for the public to be more aware of the importance of preparedness in facing hurricane disasters.

Keywords : Disasters, Hurricanes, Preparedness.
