SUMMARY

Background: *Active volcanic eruptions frequently occur worldwide, including in Indonesia, thereby increasing the risk of disasters that can occur on the island of Java. Therefore, it is essential to prepare elementary school (SD) students adequately. Student preparedness for volcanic hazards is considered crucial, and one solution is to provide early education to students, which can enhance their understanding of disaster hazards by providing pocketbooks. Pocketbooks are an effective medium for conveying preparedness information in a practical and clear manner. The objective of developing this pocketbook is to enable students to better understand preparedness steps, thus making them more ready and responsive when facing potential disaster hazards.* **Method:** *The method of developing KIE media output used is a pocketbook containing preparedness information for facing volcanic disasters.* **Results:** *Pocketbook media was chosen as KIE media because of its ability to present information clearly, be easily understood, and be portable.* **Conclusion:** *Pocketbook media has significant potential in providing preparedness information to students living in disaster-exposed areas regarding their understanding and preparedness in facing potential volcanic eruption hazards.*

Keywords: *Preparedness, Volcano, Pocket Book.*
