SUMMARY

Background: A diabetic ulcer is tissue death caused by blockage of blood vessels due to the presence of atherotrophosis microembolism. **Purpose:** Increasing awareness about healing diabetic ulcer wounds with non-pharmacological drugs, namely red betel leaf boiled water, and making it easier for medical personnel to access this video because it is presented in the form of images, writings, and sounds explaining the treatment of diabetic ulcer wounds using betel leaf boiled water. **Method:** Using an educational video about the administration of red betel leaf decoction water on the healing of diabetic ulcer wounds among medical personnel, a trial was carried out on 3 respondents. **Result:** After being given education about the administration of red betel leaf decoction water on the healing of diabetic ulcer wounds through video media, almost all respondents did not know how to treat diabetic ulcer wounds using red betel leaf boiled water. **Conclusion:** From the output of the educational video about the administration of red betel leaf decoction water on the healing of diabetic ulcer wounds, most of the knowledge is still lacking. It is hoped that respondents can apply how to treat diabetic ulcer wounds in accordance with the SOP that has been given.
