SUMMARY

Background : Landslides are natural disasters that frequently occur in Indonesia and can cause significant casualties and material losses. One of the contributing factors is soil mining, which damages soil structure. In 2024, there were 766 fatal landslide events globally, resulting in 4,933 deaths, excluding those caused by earthquakes. According to BNPB data, 519 landslides occurred in Indonesia in 2023. In Central Java, there were 125 incidents, with 3 deaths and 963 people displaced. In Klaten Regency, 101 incidents were recorded between 2020 and 2023, including 2 landslides caused by soil mining. **Objective :** To improve knowledge of landslide disaster mitigation. **Method:** The project involved planning, production, and evaluation using CapCut, Canva, and YouTube Studio. **Result :** A video titled "Landslide Disaster Mitigation" was produced (6 minutes 31 seconds, 316.2 MB, 1080p resolution) and tested on 3 respondents, all of whom gave positive feedback. **Conclusion :** Video media can serve as an effective tool to increase knowledge and awareness, particularly regarding landslide disaster mitigation.

Keywords : Disaster Mitigation, Illegal Mining, Landslide, Video.
