**Background:** Reproductive health in adolescents is a crucial factor influencing the lives and future of the younger generation. Lack of knowledge about reproductive organs, puberty, and the risks of risky sexual behavior can lead to an increase in unwanted pregnancies, sexually transmitted infections, and other health problems.

**Objective:** This study aims to create educational media in the form of an animated video entitled "Let's Get to Know Your Body!: Reproductive Health Education for Smart Teenagers" as an effective communication, information, and education (IEC) tool for teenagers.

**Methods:** The method used includes three stages: pre-production, production, and post-production, starting with collecting material from the latest scientific literature, script writing, animation design, and narration and music composition. Validation was carried out by experts in the fields of reproductive health and educational media, followed by a limited trial involving three adolescents aged 15 to 17 years.

**Results:** The trial results showed that this animated video was easy to understand, visually engaging, and suited to the information needs of adolescents. This media was assessed as improving participants' understanding of the reproductive system, puberty, reproductive organ care, and attitudes toward preventative behavior. **Conclusion:** In conclusion, this animated video has the potential to be an effective educational tool and can be applied in adolescent health promotion programs, both in schools and in health facilities, and is worthy of being developed and distributed more widely.

**Keywords:** *Adolescents, Animated Videos, Education, IEC, Reproductive Health.*
