**SUMMARY**

**Background:** Cervical cancer is the leading cause of morbidity and mortality. The incidence of cervical currently affects women of reproductive age, ranging from 15-49 years. According to the Health Office of Central Java, the number of cervical cancer patients increased by 57.9% in 2021, reaching 1,545 cases, and in 2022, it increased to 2,444 cases. Efforts to detect early-stage cervical cancer are beneficial in improving the survival rate of cancer patients and can be done by screening with the IVA Test. Health education is one of the efforts that can be made to raise awarness among of reproductive age couples (RAC) about the importance of the IVA Test. **Objectives:** To increase the knowledge of RAC about the IVA test as an early detection method for cervical cancer, leading to awarness and the willingness to undergo the IVA test. **Method:** Using the Canva platform to modify layout design and image for creating a pocketbook tilted "Cegah Kanker dengan IVA" to provide education on cervical cancer and IVA Test, targeted at RAC. **Result:** A pocket book media was developed along with its supporting components. **Conclusion:** A pocket book entitled "Cegah Kanker dengan IVA" has been created and is ready to be registered for intellectual property rights (IPR).
