RELATIONSHIP BETWEEN INFORMATION ACCESSES AND THE CHOICE OF HORMONAL AND NON HORMONAL CONTRACEPTIVES IN BANDUNG VILLAGE NGRAMPAL DISTRICT SRAGEN REGENCY

ABSTRACT

Background Of Study: Contraception is a way to prevent pregnancy. Contraceptive methods are divided into hormonal and non hormonal one of the factors that influence the choice of contraception is access to information. Based on a preliminary study that the majority of contraceptive users chose to use a type of hormonal contraception compared to non-hormonal and less contraceptive users in getting information about contraception. **Purpose Of Study:** Analyzing the relationship of information access with the selection of hormonal and non hormonal contraception in Bandung Village, Ngrampal District, Sragen Regency. **Method Of Study:** The type of this research is analytic research with cross sectional design, the sampling technique uses simple random sampling and with a sample of 90 respondents. This research instrument uses a checklist and questionnaire. Bivariate analysis uses the Chi Square test with a significance level of 95%. **Outcome:** The results showed that of the 90 respondents, some of the respondents who received good information about the selection of contraceptives were 47 (52.2%) and for the selection of hormonal and non-hormonal contraceptives the majority of respondents used hormonal contraception as much as 56 (62.2%). The Chi Square test results show that there is a relationship between information access and the selection of hormonal and non-hormonal contraceptives in Bandung Village, Ngrampal District, Sragen Regency with a p value of $0.000 < 0.05$. **Conclusion:** There is a significant relationship between information access and the selection of hormonal and non-hormonal contraceptives in the Bandung Village, Ngrampal District, Sragen Regency.

Keywords : Information Accesses, Hormonal Contraceptives, Non Hormonal Contraceptives.
