THE RELATIONSHIP OF THE LEVEL OF EDUCATION MOTHER WITH FINE MOTOR DEVELOPMENT OF CHILDREN AGE PROSECOLAH AGE 3-5 YEARS IN PAUD AREA SURAKARTA

ABSTRACT

Background: Education an important role for the progress of the nation and focuses on five aspects of development, namely moral and religious development, language development and communication, emotional social development, cognitive development, and physical development which consists of fine and gross motor coordination. Age which is very decisive in the formation of character and personality is a child with an early age that is between 0-6 years. **Purpose:** To determine the relationship between mother's educational level and the fine motor development of preschool children aged 3-5 years in PAUD Surakarta. **Methods:** This type of research uses quantitative with cross sectional method. A sample of 97 respondents with a population of 3,024 children, this sample was taken by stratified random sampling technique and quota sampling analysis using chi-square. **Results:** The majority of maternal education in PAUD in the Surakarta region were high school / vocational high school (65%) (67%) and for the development of fine motor skills most children were normal (75.3%). Analysis using the Chi-Square test showed a P value of $0.041 < 0.05$. **Conclusion:** There is a relationship between maternal education level and fine motor development in preschool children aged 3-5 years in PAUD Surakarta.

Keywords: education, fine motor, preschool age
