INFECTION PREVENTION EFFORTS WITH THE IMPLEMENTATION OF HAND HYGIENE FIVE MOMENT AND THE USE OF PERSONAL PROTECTIVE EQUIPMENT (PPE) IN HEALTH POWER

SUMARY / CORE SARI

Background: In providing services to patients, health workers have the possibility of contracting the disease, if they do not pay attention to sanitation aspects that cause a negative image and have an impact on the emergence of nosocomial infections. **Objective:** Provide complete information about infection prevention efforts by applying five moment hand hygiene and using personal protective equipment (PPE) to health workers. **Method:** Using the output of a pocket book entitled "Infection Prevention Efforts". **Conclusion:** infection prevention and control, hereinafter referred to as PPI, is an effort to prevent and minimize infection by patients, officers, visitors, and communities around health care facilities. Hand hygiene is a core element to protect patients against HAIs, washing hands must be done properly before and after taking care measures. Personal protective equipment is able to provide protection against the dangers of accidents that may occur whileworking

Keywords: Infection Prevention, Five Moment Hand Hygiene, Use of Personal Protective Equipment (PPE)
