IMPROVING KNOWLEDGE ABOUT RISK FACTORS OF DIABETIC ULCERS	
ESSENCE	
<p>Background : Diabetes mellitus is a chronic disease caused by the inability of the body to produce the hormone insulin or due to ineffective use of insulin production. One of the long-term complications is the wound that cannot heal, causing infection and eventually having to be amputated, which is commonly called a diabetic ulcer. Information about the risk factors for diabetic ulcers can be packaged through poster media output. Posters are a publication media that consists of writing, pictures or a combination of the two with the aim of providing information to the general public so that the information and messages in the poster can be conveyed to the public. Purpose : the public understands and understands what are the risk factors that cause diabetic ulcers in diabetes mellitus sufferers which are neatly packaged, attractive and easy to understand so that readers can better understand the risk factors for diabetic ulcers. Conclusion : This poster was created to increase the reader's knowledge about what are the risk factors that can cause diabetic ulcers and also as an effort to prevent or avoid diabetic ulcers.</p>
