***SAFETY STEPS WHEN MOUNTAIN DISASTER erupts
THROUGH THE MEDIA BOOKLET***

ESSENCE

Background: Disaster is an event or series of events that threatens the life and livelihood of the community, caused by natural, non-natural and human factors, resulting in human casualties, environmental damage, property loss, and psychological impacts. An erupting mountain is a mountain that breaks the material in the bowels of the earth in the form of hot clouds, gravel, cold lava, ash and so on. Lack of public awareness of the dangers and threats that can arise from eruption disasters is because the community has never received any socialization or information on eruption disaster mitigation, even some respondents did not know at all about how to mitigate eruption disasters. One of the ways to mitigate eruption disasters is to take rescue steps when a volcanic eruption occurs which is packaged through an output media *booklet*. *Booklet* is a medium for conveying messages in the form of a small book containing short writing with clear images making it easier for readers to understand the information in the *booklet*. **Purpose:** to provide education about rescue steps when a volcano erupts and to educate the public about preparedness when a disaster occurs so that they are expected to be more prepared and alert. **Conclusion:** *Booklets* are useful as a medium to convey information to people who live in active mountainous areas that are prone to eruptions. This *booklet* can be used by the special community and the general public

Keywords: Disaster, Mount Eruption, *Booklet*
