## **STAGES OF ACHIEVEMENT OF TODDLER AGE CHILDREN**

### **EXECUTIVE SUMMARY**

This final project report aims to increase the mother's knowledge about the stages of achievement of toddler-age development, motivate the mother to provide appropriate developmental stimulation so that the stages of attainment of the child's development are according to their age and help the mother to detect early developmental deviations that occur in the child. .

Toddlers are children who experience golden periods that affect the development and growth of the next child. Development is the increase in the child's ability to reach maturity as a result of maturity. Development consists of fine motor skills, gross motor skills, social personalities and language. One of the factors to optimize children's development is mother's knowledge.

Efforts to increase maternal knowledge are to provide information or health education related to the development of toddlers. The delivery of information or health education can use various ways, for example, using one type of information and education communication media.

The type of output that will be produced is a poster. This poster is entitled "Toddler Age Development Stage". This poster contains the stages of achieving children's development from the age of 1-3 years.
