KNOWLEDGE IMPROVEMENT OF THE STIMULATION OF DEVELOPMENT
PERSONAL SOCIAL IN TODDLER AGE CHILDREN WITH POSTER MEDIA

ESSENCE

Background: Development is the increase in the ability (skill) of body structure and function which is more complex, in an orderly and predictable pattern, as a result of the maturity process. Development includes gross motor development, fine motor development, social personal development and language development. Social personal development is strongly influenced by the environment and interactions between children and parents or other adults. Child development will be optimal if the child is often given stimulation. Child development will be optimal if the child is often given stimulation. Information is given using poster media.

Objective: To be able to provide knowledge to the community about stimulation for child development and to attract mothers' interest in reading to find out appropriate developmental stimulation for children. **Conclusion:** Stimulation posters for social personal development are made to increase public knowledge so that stimulation can be given to children so that their social personal development is in accordance with their developmental age stage.
