SUMMARY

Background : Whirlwind is one of the most dangerous natural disasters. This is because a tornado can destroy whatever it passes, and also objects carried by a tornado can be lifted and thrown away. Whirlwinds are among the second priority disasters that must be handled seriously to minimize the impact of the disasters that will occur. The natural disaster that dominates is the Whirlwind, amounting to 30.3%. And BNPB recorded 3,383 disasters in Indonesia from January to November 2019. Of these, the most recorded cyclone disasters, namely 1,127. This can be prevented by providing Communication, Information and Education (IEC) to mitigate hurricane disasters. **Method:** Using Adobe Illustrator media to make the Booklet design look more attractive. **Result:** Scientific project work in the form of a booklet "Mitigation of Whirlwind Disaster". **Conclusion:** Booklets can be used with the aim of increasing knowledge and providing more specific information. It can be concluded that this booklet media can provide information to increase knowledge about hurricane disaster mitigation.
