SUMMARY

Back ground: *Diabetes Mellitus is a metabolic disorder in the form of an increase in blood sugar levels exceeding normal (hyperglycemia) caused by disturbances in insulin production, insulin sensitivity, or both. Estimates of people with Diabetes Mellitus in Indonesia in 2000 were 8.4 million people and are expected to increase in 2030 to 21.3 million people. This condition places Indonesia as the fourth country with the highest number of Diabetes Mellitus sufferers in the world. One of the most common microvascular complications is peripheral neuropathy. Peripheral neuropathy is a common cause of diabetic ulcers that are difficult to control. Ulcers cause surrounding tissue to become damaged and become smelly. In order not to cause problems, this requires treatment using natural honey so that it does not become a serious problem.* **Method:** *The IEC output method used is a video containing the treatment of Diabetes Mellitus ulcers using natural honey.* **Result :** *IEC media is in the form of video because the video about treating diabetes mellitus ulcers using natural honey contains clear, easy-to-understand information.* **Conclusion;** *This video was made to increase public knowledge about how to treat diabetic ulcers to prevent amputation.*
