SUMMARY

Background ; The author chose this theme because many women who diagnosed leucorrhoea, do not know how to prevent and take care of the female organ properly and correctly. Women of childbearing age (WoCA) is a woman who in an active reproductive period, there are the ages of 15-49 years, either widowed, married, or single. The percentage of women who have experienced leucorrhoea based on World Health Organization (WHO) reaches 75%, in Indonesia cases of leucorrhoea increased every year, cases in 2010 are 52% cases, in 2011 are 60% cases, in 2012 are 70% cases and in 2013 are 55% cases of leucorrhoea. **Method** ; Development of Information and Education Communication (IEC) media in the form of a booklet entitled "Preventing Leucorrhoea by Maintaining the Cleanliness of Female Organ", explains about: the definition of female organ, the benefits of maintaining female organ, how to maintain female organ, how to care for female organ, the definition of leucorrhoea, how to treat leucorrhoea, how to prevent leucorrhoea and the factors that cause leucorrhoea. **Result** ; The final project was made with the title "Preventing Leucorrhoea by Maintaining the Cleanliness of Female Organ". **Conclusion** ; The booklet is chosen by the author using language and image that are easy to understand for readers to make it easier to convey education. It is hoped that readers can easily understand the booklet and can apply it in daily life.

Keywords: *cleanliness, female organ, leucorrhoea, booklet*
