ABSTRACT

Background ; Injury is the impact of an external cause both physical and mental damage. Injuries to children can be fatal if parents lack supervision of children. Dangerous items such as cables, slippery floors, sharp objects and others should be avoided from children. Preschool-aged children do need extra supervision. How to prevent this injury, parents must always accompany the child's activities, if the child falls, take steps to give red medicine or alcohol. Preschool children are a golden age where stimuli for all aspects of development play an important role in the task of further development, where 80% of children's cognitive development has been achieved at preschool age. Anticipatory Guidance is an educational method provided to provide guidance to parents so that children grow and develop optimally. **Method** ; Injuries to preschool children with parental education methods. **Destination** ; Parents can increase knowledge and understand how to prevent injuries to preschool children. **Conclusion**; It can be concluded that the booklet media can provide information as an effort to increase knowledge in parents about injury prevention.
