SUMMARY

Background: *Coronavirus Disease 2019 (COVID-19) is a new disease caused by the SARS-CoV-2 virus and humans do not have immunity to the virus. SARS-CoV-2 infection causes symptoms of acute respiratory distress and in severe cases can cause pneumonia, acute respiratory syndrome, kidney failure and even death. Pregnant women are a major concern because they are one of the vulnerable groups with a greater potential risk. The lack of knowledge of pregnant women regarding efforts to prevent COVID-19 causes an increase in anxiety which can reduce the immunity of pregnant women so that they are more susceptible to infection.* **Method:** *The method used is increasing knowledge through video media. Video media can be used as an educational medium on efforts to prevent transmission of COVID-19 to pregnant women. Video media has advantages in conveying information because it contains elements of hearing and seeing, thus facilitating the understanding process.* **Result:** *Videos about efforts to prevent the transmission of COVID-19.* **Conclusion:** *It can be concluded that video media can provide information as an effort to increase knowledge to the public or especially pregnant women about efforts to prevent the transmission of COVID-19 to pregnant women.*

Keywords: *Coronavirus Disease, Pregnant Women, Prevention of Transmission, Video Media.*
