**SUMMARY**

**Background ;** Post surgery is a condition after surgery and medical treatment to repair damaged tissue or organs, surgery can pose a risk of surgical wound infection, which is one of the post-operative complications characterized by pain, pus and edema. There are several risk factors that cause postoperative wound infection, one of which is the postoperative factor, namely wound care. The role of the family in postoperative wound care is needed to prevent wound infection. Health education is an effort to promote health so that families receive health messages regarding wound care to prevent postoperative wound infection. **Method ;** KIE media which is used to increase family knowledge about behavior in the prevention of postoperative wound infections with booklet media. **Result;** The media booklet entitled "Family Education About Wound Infection Prevention Methods in Postoperative Patients Through the Media Booklet" was created using a design application with a size of 3.5 x 8.5 inches consisting of 19 pages. **Conclusion;** With the media booklet, it can increase knowledge to the community, especially the patient's family, about care management which is useful for preventing wound infection in postoperative patients.
