Summary

***Background;** Indonesia is the fourth largest population in the world. From the results of the 2018 census, Indonesia's population is 267.7 million, with an increase of 1.49% per year (World Development Indicators - Public Data 2018). The new paradigm for the national family planning (KB) program has changed its vision and mission. The vision of the National Family Planning Health Agency (BKKBN) is "Quality Families 2015", with the mission "To build every Indonesian family to have children who are ideal, healthy, educated, prosperous, resilient and their reproductive rights are fulfilled through policy development, provision of promotional services, protection, population and family information as well as family planning institutions and networks. The role of the couple is very necessary in carrying out family planning ". Couples' knowledge about family planning and the partner's role and support is still low. This makes me feel interested in conducting counseling and support in decision-making and participation in family planning wives **methods;** educating the public, especially married couples about the choice of contraceptives. Booklets are several sheets of paper that can be combined, folded, and bound to form a book. The book is more detailed and clear, because it can cover more of the messages it conveys. This booklet uses printed media so that it costs less when compared to using audio and visual media as well as audio-visual media.*

***Conclusion;** The role of a partner is very necessary in carrying out family planning*
