SUMMARY

Background : Parents have a duty to carry out toilet training for children who have started to enter the child independence phase. Success of toilet training depends on the readiness of the child and the family, such as when the child's ability is physically able and strong to sit alone or stand so that it makes it easier for children to be trained to urinate and defecate, as well as psychological readiness where children need a comfortable atmosphere in order to be able to control and concentrate in stimulating bowel movements and urination. **Method :** The method used is a booklet that contains toilet training. **Result :** The output that I produce is a booklet entitled " Education about toilet training for mothers with toddlers (1-3 years). **Conclusion :** Toilet training education for mothers with toddlers-age children with the media booklet is a booklet that contains a description of the concept of toddlers-age children and the concept of toilet training, this booklet is small and easy to carry everywhere, besides that it is also an education booklet for toilet training for mothers with toddlers, it is designed attractively so that readers are interested in reading it.
