SUMMARY

Background; Based on the study, the incidence of decubitus in Study International was 1.9% - 63.6%, ASEAN (Japan, Korea, China) was 2.1% -18%, while in Indonesia it was quite high at 33.3%. People who spend too long in their daily lives are not able to carry out activities where over time they will experience decubitus and if they are not treated with denar, they can cause decubitus sores that are getting worse. The purpose of making this media is to increase capacity and provide information to the public about the correct treatment of pressure sores. **Method;** The IEC output method used was in the form of video media containing the meaning of pressure sores, stage of pressure sores, understanding of VCO, and how to treat pressure sores with VCO, how to make VCO. **Result;** The output that was achieved was a video wound care with VCO on decubitus wounds. **Conclusion;** The video output "stage 1 pressure wound treatment with virgin coconut oil" is designed to help the healing process of decubitus wounds by properly treating wounds and increasing knowledge

Keywords: *pressure wound care, Video, VCO*
