'Aisyiyah University Surakarta.

## SUMMARY

**Background;** *Diabetes mellitus is a collection of symptoms that arise in a person caused by an increase in blood sugar levels. Kemenkes RI 2019 stated that the prevalence of diabetes mellitus in Central Java showed a figure of 2.98%, especially in the city of Surakarta (Kemenkes RI, 2019). Complications that can occur are infection and damage to skin integrity. However, most leg amputations are preceded by foot ulcers. One of the non-pharmacological wound treatments from diabetic foot ulcers is using natural honey. Information regarding these wound care efforts can be obtained through the output booklet. Booklets are books that contain text and images that are easy to carry anywhere.* **Method;** *Outer KIE used in the form of booklet using honey on wound treatment diabetic foot ulcer .* **Result;** *The output of this final project is in the form of a booklet the title of madu alami sebagai alternatif perawatan luka kaki diabetik.* **Conclusion;** *booklet This was created to increase readers' knowledge about wound care using natural honey to prevent amputation in people with diabetic foot ulcers.*
