SUMMARY

Background; Burns are wounds that develop on the body's surface as a result of stress from contact with hot substances such as fire, liquid, and chemicals. In Central Java, the incidence rate of burns is 1.03%, suggesting a location where injuries occur at home and in the environment, with as many as 44.69% occurring in males, 36, 61% and women, 55.54%. Burns have a high incidence rate in Southeast Asia, with the highest being 27% and 70% occurring in women. Burns can be caused by hot oil splashes, hot water, or exhaust, among other things. Using cold water 88.6% of the time and toothpaste 53.7% of the time are examples of inappropriate handling. **Methods;** Providing home-based housewives with knowledge on treating burns via instructional videos. Videos serve as educational tools to help housewives become more knowledgeable about treating burns that happen in the home. They may also help those who have difficulty reading since they use visual, written, and aural explanations. **Result;** The final product, titled "Education on Treatment of Burns in Housewives at Home Using Video Animation," is a video with a runtime of 07:47 seconds and a file size of 812.2 MB. It has been put to the test on three housewives, and the outcomes of the videos are respectable, simple to comprehend, and simple to get. **Summary;** It may be inferred that the video's output can enlighten the general people on how to effectively provide independent home treatment for burns and avoid common blunders in burn care.

Keywords: Burns, Burn Care, Video Education.
