Universitas'Asyiyah Surakarta

**Background:** The cause of the lack of understanding of the Menjing village community towards disasters is the lack of education to the community which is still low and the low concern of the community towards disasters after being given education that requires socialization to the surrounding neighbors but the results cannot be maximized and the delivery is only brief and cannot be detailed as conveyed during the socialization at the Village Hall. **Purpose:** To determine the relationship between the level of knowledge and community preparedness in dealing with landslides **Method:** The type of research used is analytical survey research. **Results:** A relationship was found between knowledge about disasters in the community and preparedness in dealing with landslides, which is evidenced by a p value of 0.000 or less than 0.05. **Conclusion:** There is a calculation of the majority knowledge variable in the good category, the calculation of the majority community preparedness in the very prepared category

Keywords: *Knowledge, Preparedness, Landslide Disaster*
