SUMMARY

Background: Injury is a health problem in the world and Indonesia as the main cause of death in children. Data on the high number of deaths that occur in children as many as 18,000 each year, with the main causes are traffic injuries, drowning, burns, falls, and poisoning. One of the main risk factors causing injury in children is an unsafe environment. Some ways of preventive efforts that can be done in cases of toddler injuries are by making educational media to increase parents' knowledge about the importance of proper handling of injuries. **Objective:** Develop educational and informational media for the community, especially parents who have toddlers who can facilitate and assist in dealing with injuries in children under five so that cases of injury in children under five do not become severe. **Method:** Making educational media in the form of a booklet entitled "First Aid for Accidents (P3K) Injuries to Toddlers". **Results:** After conducting a trial on 3 respondents by giving a Pre-Test and Post-test, it was found that the booklet could add insight and knowledge to parents in dealing with injuries to toddlers. **Conclusion:** The creation of this booklet increases the availability of educational media for especially parents who have toddlers.
