'Aisyiyah University Surakarta**

**SUMMARY**

*Background Scabies is one of the most common and highly contagious skin diseases, particularly in densely populated environments with poor sanitation,. According to data from the Indonesian Ministry of Health, the prevalence of scabies in Indonesia ranges from 5.60% to 12.95%, indicating that approximately 1 in 10 people is infected. This situation highlights that scabies remains a significant public health issue, making the promotion of clean and healthy living behaviors from an early school age a crucial preventive measure.. Objective: to create information media that can help improve public understanding of scabies, especially for groups who have limited reading skills. Method: the media used is video media that is arranged based on the production process, namely pre-production, production and post-production. Results: in general, the signs of scabies are itching on the day's page and there are tunnels and two educational videos made, namely 4 minutes 55 seconds with a file size of 132.4 MB. Conclusion: video media can be used as educational and information media to increase students' knowledge to maintain personal hygiene, especially personal equipment.*
