ABSTRACT

Background: Postpartum is a physiological process that occurs in a woman and requires good care to prevent infection. Perineal treatment can be done by pharmacological and non-pharmacological methods. Non-pharmacological treatment is by using green betel leaves because the content contained in green betel leaves has an antibiotic therapeutic effect that serves to heal wounds. **Objective:** To determine the healing of perineal wounds in postpartum mothers by giving a decoction of green betel leaves. **Method:** Case study with Descriptive research by observing perineal wounds before and after administration of green betel leaf for 7 days starting at puerperal day 1 to day 7 by using betel leaves for cebok which is done twice a day which is every morning and evening after mother taking a shower. **Results:** Before treatment the perineal wound had REEDA 8 and after treatment the REEDA score dropped to 0. **Conclusion:** The use of green betel leaf decoction proved to be faster to help the healing process of the perineum wound within 6 days.
